CLOAKTIX

Private, fair tickets on Midnight

Rules for resale.
Privacy at the door.

Preview · schema 3 · NIGHT only

Current visual system · illustrative sample screens

PROBLEM

Ticketing breaks trust twice.

Uncontrolled resale

Scalping puts fans and organizers at odds. Rules written in terms are not enough.

Enforce resale policy on-chain.

Unnecessary identity exposure

Getting into an event should not mean handing over a wallet address or identity document.

Prove eligibility in zero knowledge.

CloakTix combines **fair ticket rules** with **private proofs**.

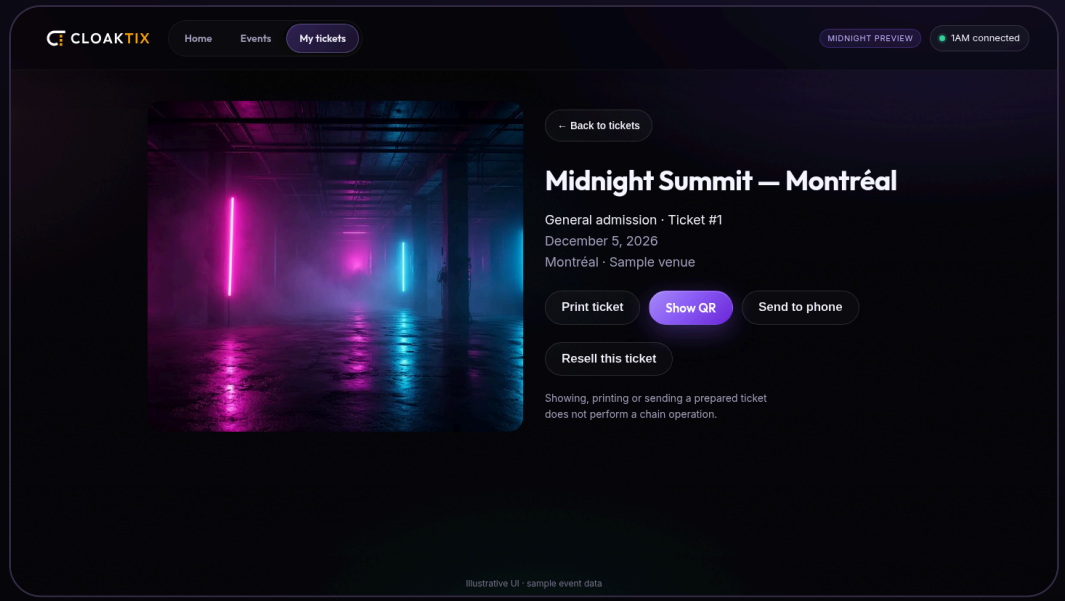

FAN FLOW

Find an event. Keep a pass. Get in.

01 Browse published events.
Connect to see live prices and buy.

02 Pay in NIGHT.
USD is listed; NIGHT is estimated.

03 Open a ticket card.
Print, Show QR or Send to phone.

Prepared ticket display does not itself perform a chain operation.

ORGANIZER AREA

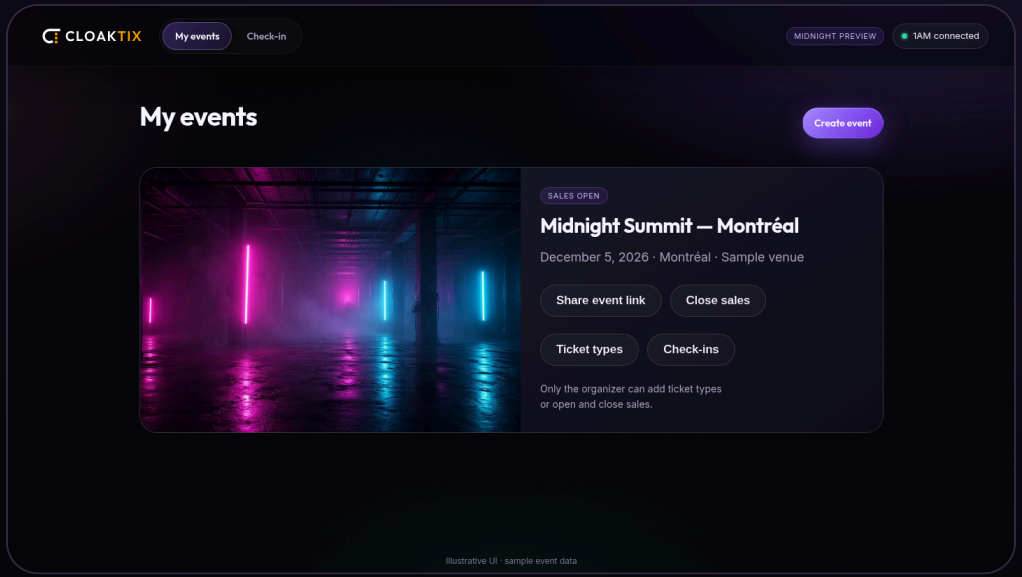

A dedicated space to run the event.

My events | Check-in

Wallet-based organizer identity, separate from the buyer navigation.

Required event fields: name, date, venue, description and cover.

Only the organizer can add ticket types or open and close sales.

Share event links and manage sales from My events.

ORGANIZER CONTROLS

Resale rules belong to the organizer.

Capped

Resale cannot exceed the configured maximum price.

No resale

Listing is refused.
Entry remains available.

Unlimited

No resale price cap.
The 3% fee still applies.

18+

Age eligibility, without a birthdate.

An additional ZK proof requirement. Demo uses a test issuer; not a production identity service.

DATA & PRIVACY

Public event details. Private eligibility.

Off-chain

Organizer-signed name, date, venue, description and cover.

→

Browser

Zero-knowledge proofs for ticket operations and age eligibility.

→

At the door

Verify the pass, not the fan’s wallet address.

Walletless browsing is published metadata — not a live ledger indexer.
Connect for live prices, availability and purchase. NIGHT payments are pseudonymous, not shielded.

BUSINESS MODEL

3%

on every sale and resale

Aligned with the organizer.

Conceptual split. No payout addresses displayed.
NIGHT-only payments on Midnight Preview.

ONE WALLET, EVERY DEVICE

Buy on PC. Bring the pass to your phone.

Buy on PC.
Show it on your phone.

The same wallet derives the same ticket identity across devices.

Send to phone | Print ticket

Keep private ticket links and codes private.
Resale or replacement invalidates old copies.

Wallet-derived ticket identity · private ticket links stay private · resale or replacement invalidates old copies

ARCHITECTURE

Compact rules. In-browser proofs. 1AM.

Web app

React interface
Browser-generated ZK
1AM wallet connection

→

Compact contract

Ticket policies
Escrowed resale
Entry validation

→

Midnight Preview

Schema 3
NIGHT-only payments
Public contract configured in the app

Built with OpenZeppelin Compact Contracts.
Off-chain signed metadata supplies the event catalog; wallet connection supplies live chain state.

STATUS & NEXT

Working on Midnight Preview today.

Available now

NIGHT-only payments · organizer area · event links · signed metadata · clickable ticket cards · QR entry · policy-based resale.

Next

Production age issuer · shielded payments · audit · multi-gate synchronization.

Known limits

- Multiple wallet approvals per transaction
- Tickets not in the 1AM NFTs tab
- NIGHT payments are pseudonymous, not shielded
- CloakTix is not audited
